WHERE IS HIV HITTING HARDEST?

While HIV does not discriminate and can affect anyone, Canada’s HIV epidemic is concentrated in key populations – a result of both biological risk factors and the social determinants of health.

- Indigenous people are 2.7 TIMES MORE LIKELY TO GET HIV than non-Indigenous Canadians.
- Canadians born in countries where HIV is endemic are 6.4 TIMES MORE LIKELY TO GET HIV than other Canadians.
- People who inject drugs are 59 TIMES MORE LIKELY TO GET HIV than people who do not.
- Men who have sex with men are 131 TIMES MORE LIKELY TO GET HIV than other men.
