

AIDS. DO CANADIANS REALLY GET IT?

The answer is both "yes" and "no." Yes, Canadians become infected with the virus that causes AIDS. Every two hours. And no, unfortunately, a lot of Canadians just don't get it. AIDS isn't somebody else's problem. It affects the people you love, the community you live in, and the economy that supports us all. Lend your support: become better informed, minimize your risk, talk about AIDS with others, or support your local AIDS service organization. **To find out more, visit cdnaids.ca.**
