

The liver is the largest internal organ. It is very important to our health. It stores, processes and modifies most of what we put in to our bodies

LIVER

Hepatitis means inflammation of the liver, many things can cause hepatitis, alcohol, some drugs, bacteria and viruses

Hepatitis C is caused by a virus

It is spread by blood to blood contact, Sharing needles and works is the most common

# What is Hepatitis C?

Symptoms of hepatitis C can include:

Fatigue or tiredness

Nausea and digestive problems

Many people have sore muscles and joints

Nights sweats may occur

Left untreated, hepatitis C may progress to cirrhosis. Cirrhosis is a liver that is very scarred. Find out what condition your liver is in from a physician. Take charge by exploring existing medical treatments and living a healthy lifestyle.
